- › *Customizable with logos or graphics*

e-force

safe shipping pack

Practical strong packaging

E-force crate is made of only three parts: lid, central body made up of four fir reinforced plywood sides joined by painted metal corners, and a bottom panel with plinth to aid mechanical crate lifting.

The assembly, facilitated by a system of joints between the parts, is extremely simple and fast.

Increased stackability

Compared to the traditional spruce panel crates or any other type of wood, **E-force** of Emiliana Imballaggi offers the highest weatherproof levels, highest safety level for sea shipment as it is thermal shock resistant and not cracking, greater mechanical resistance and it is fully compliant to ISPM-15 FAO regulation.

E-force is made of Birch plywood, 6 mm thick, 5 layers, offering maximum strength, flexibility and durability. **E-force** bottom can be made of plywood or full/open wood, can be foreseen 2 or 4 way. Available also in 9 mm plywood thickness.

Customizable with hooks, handles and/or hinges

E-force
Vertical reinforcements on the sides and cover.

E-force with double T reinforcement
Double T reinforcements on the long side and / or front side.
