## A practical, modular and folding solution

**Pallet Collar** is a system of modular collars of different heights, each equipped with galvanized steel hinges. Folding strips in dried wood 20 mm thick and 200 mm high, can be stacked and mounted on pallets. Practical and easy to assemble the collars allow you to build boxes of the desired height and to close them with a choice of 6 or 9 mm plywood lid with galvanized steel corners or OSB with internal strips. The width and depth dimensions fits the EPAL pallet 1200 × 800 mm.

## Pallet Collar are resistant and reusable

**Pallet Collar** are foldable, light and user friendly. This facilitates transport and storage for re-use.

No nails  
No rivet guns
