ASSEMBLY

NO
NAILS

WITHOUT
RIVET GUNS,
STRAPS OR STAPLES

Strength and practicality

E-box is a **folding crate** made of plywood, suitable for sea, air and road transport of all types of products. It owes its **sturdiness** to the **quality** of the materials from which it is made. The walls are made of plywood: this offers a high degree of resistance to load tensions during transport. The corner brackets, which are the most critical areas, are made of galvanised steel, while the profiles are fitted with slots that interlock with the locking system of tabs and slots attached to the crate sides, **which makes assembly and fixing much easier.**

E-box achieves very high standards of resistance, in terms of both static and dynamic load capacity.

Locking system of tabs and slots

E-box is simple and safe

Thanks to its features and simple design, the **E-box** meets the requirements of occupational safety regulations by allowing crates to be opened and closed in any working environment, **with no need to install nailing systems**, making it **cost-effective and practical.**

Folded crate

E-box is economical

The rapid assembly system without nails, rivet guns or staples allow a **reduction of the purchase and running costs.** Thanks to the high-quality materials **E-box has a lighter weight** by same volume, in this way can be **saved** also shipment costs.

Pos	Int. dimensions (mm)			Ext. dimensions (mm)			Weight (kg)	Base type provided
