STURDY

## High-quality raw materials

**E-press** plywood folding crates stand out for their **high-quality** manufacturing and the use of fine raw materials. Plywood offers maximum **strength, flexibility and durability**. Compared to conventional wooden crates, **E-press** offers **greater protection against** weathering, maximum **safety** even in maritime shipments as it is thermal shock resistant, high mechanical resistance, and **compliance with international ISPM-15** **FAO phytosanitary regulations**.

## Practical and sturdy packaging

The **E-press** crate consists of only three parts: lid, side consisting of four panels joined by a special metal angle, and 2- and 4-way pallet to make it easier to lift the crate mechanically. It is **extremely simple and quick to assemble**, thanks to a system of interlocking parts.

Dismantled crate

## E-press accessories

The E-press crate allows for extensive **customisation** with internal dividers, custom shaped structures, prints, saddles, handles, wedges, locking system of tabs and slots, and spacers.
