

CRATE WITH SINGLE LOCKING PANELS

- › Quick assembly
- › Walls can be assembled in the desired order for bulky products or in confined spaces
- › No nails or staples
- › High stacking strength
- › Compliance with ISPM-15 FAO phytosanitary regulations
- › Customisation with logos, graphics, handles, locking system of tabs and slots, and dividers

QUICK
ASSEMBLY

NO
NAILS

WITHOUT
RIVET GUNS,
STRAPS OR STAPLES

Custom made and can be assembled in several ways

The **E-six** plywood crate is suitable for transporting all kinds of products by sea, air and land. It has **six individual walls that can be assembled in any required order**. In this way, the crate can be mounted in several ways, even around its content: this is especially **handy in the case of very bulky and large products or in confined spaces**.

E-six is **sturdy** due to the quality of its materials and its plywood walls, which allow for a **high degree of resistance** to different load tensions during transport. The profiles are fitted with slots that interlock with the locking system of tabs and slots attached to the crate sides, which makes assembly and fixing much easier.

Sizes and loads

E-six ensures a **high level of protection** in all transport, storage and warehouse operations. **E-six** can also be **customised** with company logos and international symbols, which makes it possible to immediately identify the product and serves as an effective advertising media, creating a high-quality initial presentation for your product.

For different overall dimensions

E-six is a versatile crate, which solves several assembly problems: the **6 single sides** (2 short crate sides, 2 crate sides, the pallet and the lid) **can be assembled 'around' the goods it contains**, even by a single operator. It is sturdy due to the thickness and the kind of plywood and suitable to pack **bulky and heavy goods** in an extremely simple way. The disassembly phase is equally simple.

E-six: simple and safe

Thanks to its features and simple design, the **E-six** meets the requirements of occupational safety regulations by allowing crates to be opened and closed in any working environment, **with no need to install nailing systems** and without limiting the use of this type of packaging, making it **cost-effective and practical**.

E-six is affordable

The quick assembly system, with no need for nails, rivet guns and staples, helps to **reduce overall purchasing costs** as well as operating costs. The materials are lighter in weight than conventional products, which allows for substantial savings in shipping costs, along with the option of disposing of them in a more eco-friendly way.
